

Squaring wheel for ABM

Our SABATEC Squaring wheel is a smooth rotating feeder unit. With a conversion of your old ABM, welding speed can be maintained up to 400 cpm. The direct drive from the transport chain eliminates timing issues due to machine backlash.

The Squaring wheel replaces the old push pawl assembly, the Ferguson gearbox and the rocker arm clutch. This means less expensive wear and tear parts.

E2AB3400

Advantages

- Harmonious rotary feed unit
- Direct connection with the conveyor chain
- Ferguson gearbox not needed
- Optimum insulation through ceramic fingers
- Fewer wear and tear parts
